Leonard Chibueze Oba

Backend Engineer

leonard6oba@gmail.com | GitHub | LinkedIn | Lagos, Nigeria

SUMMARY

Backend engineer with 4 years building production APIs and data-intensive services in Node.js and TypeScript, with full-stack range across ASP.NET Core and React. Designs ACID-compliant transactional systems, optimizes database performance, and owns features end to end across healthcare (HMO), fintech, inventory, and investment platforms.

LANGUAGES & TECHNOLOGIES

Languages: JavaScript, TypeScript, C#, SQL
Backend & Frameworks: Node.js, Express.js, NestJS, ASP.NET Core MVC, React.js
Data: PostgreSQL, MySQL, SQL Server, MongoDB, Redis, Drizzle ORM, Prisma
Cloud & DevOps: AWS (Lambda), DigitalOcean, Docker, Kubernetes, CI/CD (GitHub Actions), PM2
Concepts: Microservices, Distributed Systems, System Design, REST APIs, ACID-compliant transactional design, Background Jobs, Unit Testing

EXPERIENCE

BUA Foods Plc **August 2026 – Present**
IT (Business Technology) *Victoria Island, Lagos · On-site*

- Work with SAP ERP and Excel to manage, process, and maintain business data across operations.
- Provide day-to-day IT support to staff, setting up network and internet connectivity and configuring devices with the correct IP settings.
- Manage user access by adding staff accounts to the correct office and work domains.
- Support an implementation programme across the Sugar and Flour & Pasta business units, producing minutes and tracking action items from project review meetings.

Anchor HMO International Ltd **July 2026 – Present**
Backend Engineer *Lekki, Lagos · Hybrid*

- Maintain and extend the existing backend for the mobile app and the enrollee and provider portals, shipping new features in Node.js, Express, MySQL, and Prisma.
- Migrating the company's core systems and data off Toshfa, a third-party vendor platform, to an in-house platform, giving the company full ownership of its systems and reducing dependence on an external provider.
- Optimize API endpoints to improve response times and reduce database load.
- Built event-driven background jobs that send email notifications automatically when defined criteria are met, ensuring timely delivery without manual intervention.

Papyrus **August 2024 – July 2026**
Backend Engineer *Remote*

- Migrated the ORM layer from Prisma to Drizzle, improving query performance by ~20% through optimized execution plans, indexing, and elimination of N+1 query patterns.
- Designed and led development of a FIFO stock-depletion algorithm that consumes oldest inventory first, ensuring accurate inventory tracking and compliance.
- Implemented API throttling and rate limiting to prevent abuse and keep the backend stable under high traffic.
- Integrated Sentry monitoring and error tracking, improving proactive issue detection and reducing incident resolution time.
- Contributed to CI/CD pipelines on AWS using PM2, supporting PR reviews, load and stress testing, and unit testing to maintain code quality.

1860 Travels **October 2025 – February 2026**

Full-Stack .NET Developer (Part-time contract) *Remote*

- Designed and built a full-stack travel management platform using C#, ASP.NET Core MVC, SQL Server, and JavaScript.
- Built and maintained backend services and controllers for bookings, customer requests, admin operations, and third-party integrations.
- Extended a legacy ASP.NET Core codebase, translating existing business logic into scalable backend services.
- Integrated the WhatsApp Business API (webhooks, messaging, media handling) and IMAP email services with threading and attachment support.
- Set up and maintained CI/CD pipelines with GitHub Actions, automating deployments to Plesk hosting.

Sefavest **August 2025 – December 2025**

Backend Engineer (Part-time contract) *Remote*

- Architected and implemented core backend modules for an investor platform connecting investors with businesses.
- Developed and maintained RESTful APIs with Node.js, Express, and TypeScript for secure onboarding and investment transactions.
- Modeled and optimized MongoDB schemas for investor profiles, business listings, and transactional data using ACID-compliant design principles.
- Deployed and managed services on Render, adding monitoring and performance optimization for scalability.

LeverPay **March 2023 – August 2023**

Frontend Developer (Contract) *Remote*

- Built core features for an enterprise fintech application using TypeScript and React.js, including an automated invoice-generation system that creates and sends invoices based on ordered items.
- Developed a real-time animated notification system, improving transaction visibility and user engagement.
- Delivered full-cycle development from Figma design to production, integrating REST APIs with Axios across core merchant workflows.

PROJECTS

- **BYTEME** — Built and published an open-source npm CLI (@brainergybyleo/byte-me) with a Vitest test suite and a tag-triggered GitHub Actions release pipeline across Node 18–22, using Node.js, Commander, and Chalk. (2025)
- **GENSWIFT** — Built a CRM for medical reps to place and track orders, giving organizations visibility into sales workflows. (2025)

EDUCATION

Ekiti State University **2023**

BSc, Computer Science *Ado Ekiti, Nigeria*

CERTIFICATIONS

IBM Full Stack Software Developer Certificate, Coursera (2022)
